Professional Summary

Backend-focused software engineer with hands-on experience designing and building distributed, real-time systems using Java, Spring Boot, and event-driven architectures. Experienced in developing scalable REST APIs, secure authentication systems, streaming applications with Apache Kafka, and containerized backend services. Strong foundation in software engineering principles, database design, distributed systems, and object-oriented programming.

Technical Skills

- **Languages:** Java, Python, SQL, JavaScript/TypeScript
- **Backend Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Hibernate, FastAPI
- **Messaging & Search:** Apache Kafka, Apache Lucene
- **Databases:** PostgreSQL
- **DevOps & Tools:** Docker, Git, GitHub Actions
- **Monitoring & Analytics:** Grafana, Power BI, Tableau
- **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks

Projects

Log Analytics Platform *Distributed Systems Project*
Java, Spring Boot, Apache Kafka, Apache Lucene, Grafana *May 2026 – Jun 2026*

- Built a distributed real-time log analytics platform using Java, Spring Boot, Apache Kafka, and Apache Lucene.
- Designed a Kafka-based event-driven pipeline for ingesting, indexing, processing, and analyzing log events in real time.
- Developed full-text search functionality for fast retrieval and filtering of log records, and created REST APIs for analytics, metrics aggregation, search, and operational monitoring.
- Containerized multi-service infrastructure, integrated monitoring dashboards for observability, and wrote unit tests for analytics and anomaly detection workflows using mocking frameworks.

Voltstream – EV Grid Intelligence Data Pipeline *Data Engineering Project*
Python, Databricks, OpenWeather API, Power BI *Mar 2026 – May 2026*

- Designed and implemented a multi-layered data pipeline for processing EV charging station and weather datasets using medallion architecture principles.
- Built scalable ingestion and transformation workflows for nested and semi-structured data from external APIs, with data cleaning, deduplication, and historical tracking mechanisms to improve reliability.
- Implemented geospatial enrichment and risk-scoring logic to identify potential charging station downtime caused by weather-driven grid strain.
- Designed analytical data models and BI workflows for operational monitoring, and optimized processing for efficient API utilization, incremental updates, and scalable transformations.

PulseDrop – Real-Time Incident Reporting System *Backend Engineering Project*
Spring Boot, Spring Security, PostgreSQL, React, TypeScript *2026*

- Built a secure full-stack incident management platform enabling authenticated users to create, track, update, search, and manage incidents.
- Implemented JWT-based authentication and role-based authorization with ownership validation, allowing admins to manage all incidents while restricting users to their own.
- Designed a layered backend architecture using Spring Security, Spring Data JPA, and Hibernate, with RESTful APIs documented via Swagger UI.
- Implemented request validation, centralized exception handling, Swagger documentation, and layered service architecture to improve maintainability.

Education

MVJ College of Engineering Bengaluru, Karnataka
Bachelor of Engineering – Computer Science & Engineering (Data Science) 2023 – 2027
GPA: 9.03/10

Achievements

- **Back to the Metadata Hackathon (OpenMetadata), April 2026:** Built a Notion connector for OpenMetadata, enabling metadata synchronization between Notion and OpenMetadata.
- **Data Driven Riddle Contest – VertechX 13.0, MVJCE, Nov 2025:** Won 1st place in a data-driven problem-solving contest conducted as part of the department's technical fest.
